

Responsible use of AI discussion feedback

Please use [this video](#) to guide your session. You will be instructed to pause at appropriate intervals for discussion. If the YouTube link doesn't work you can also find it on SharePoint [here](#). You can find the PPT that accompanies the video [here](#) if you need any of the links later. All of this is also on Staff Links for your department to access.

Please save your own copy of this document and note down the *highlights* of your department's conversations that you want to share. No need to record everything, and note form is fine. I will collate the responses and share them (anonymously where it seems appropriate!) with HODs.

- 1. Student use of AI:** Please give any positive and negative examples of student use of AI e.g.
 - AI tools your department use successfully with students
 - Issues surrounding students using AI to cheat and how you deal with them

- 2. Staff use of AI:** Does your department already use any AI tools for school tasks? If so, which tools and what for? How do you feel about staff using and openly acknowledging their own use of AI?

- 3. Training:** Are there any specific areas of training on the topic of AI that you feel would be helpful for future staff INSET? What is needed by way of student-facing training?

- 4. Comments:** Any feedback on how helpful/unhelpful has this INSET format has been and how it might be improved (optional)
